The Womens Health Clinic provides an extensive range of services for both women and children. These can be arranged with the doctor of your choice. Please feel free to contact us to discuss any of these services in detail. Menopause consultations, Mirena coil fittings and Infertility consultations are extended appointments of 30 minutes. All other appointments are scheduled every 15 minutes.

Patients will be contacted if a result of a test is abnormal. We encourage patients to telephone or email us to receive them. All patients will be called with the results of their smear tests, even if the results are normal. Copies of all investigations are available to the patients if requested.
